PROFESSIONAL SUMMARY

Senior Backend / Full-Stack Software Engineer with 8+ years of experience building enterprise applications, distributed systems, microservices, and data-driven solutions. Strong expertise in **Java** and **Spring Boot**, with experience in scalable REST APIs, database architecture, security, integrations, automated testing, CI/CD, and cloud deployments.

Proven ability to own solutions across the full software development lifecycle, from technical analysis and architecture design to development, deployment, production support, and incident resolution. Experienced in **Agile/Scrum**, technical decision-making, code reviews, and cross-functional collaboration, with a focus on **Clean Code, SOLID, maintainability, scalability, and software quality**.

LANGUAGES

Spanish (*Native*), **English** (*Advanced*), **Portuguese** (*Advanced*)

PROFESSIONAL EXPERIENCE

Coderland — FIFA

Senior Backend Developer

June 2026 – Present

Spain / Remote

- Contributed to the end-to-end development and production delivery of a FIFA anti-doping platform, participating in technical analysis, backend architecture, development, testing, deployment, and production support.
- Designed and implemented scalable backend services using Java 21 and Spring Boot, following microservices architecture, Clean Code, SOLID principles, and software engineering best practices.
- Designed and developed REST APIs, taking ownership of API contracts, backend business logic, database interactions, integrations, testing, and production deployment.
- Developed and maintained approximately four microservices per project, focusing on maintainability, reliability, security, and efficient communication between distributed services.
- Worked extensively with PostgreSQL and SQL, designing data models and implementing queries and database operations required by backend services.
- Implemented backend security mechanisms including CSRF protection, session management, and secure authentication flows integrated with FIFA's login ecosystem.
- Used Redis for caching and session-related functionality, improving application efficiency and reducing unnecessary database or service operations.
- Developed automated tests and performed code reviews, ensuring code quality, maintainability, reliability, and adherence to established engineering standards.
- Integrated backend services with external platforms and services, including Jira and Jumio, ensuring reliable communication between internal and third-party systems.
- Containerized services with Docker and participated in CI/CD and cloud deployment workflows across AWS and Azure environments, including EC2-based infrastructure.
- Managed application deployments and supported production releases, troubleshooting and resolving backend bugs and incidents in production environments.

- Collaborated with Agile teams throughout the complete software development lifecycle, from technical analysis and API design to implementation, testing, deployment, and production support.
- **Technologies:** Java 21, Spring Boot, Microservices, REST APIs, PostgreSQL, SQL, Redis, AWS, Azure, EC2, Docker, CI/CD, CSRF, Session Management, Jira, Jumo, Git, Clean Code, SOLID.

Scanntech

Full-Stack Developer (Java / Angular)

April 2023 – June 2026

Montevideo, Uruguay

- Designed and implemented microservices-based enterprise applications using Java, Spring Boot, and Angular, contributing to architectural decisions across backend and frontend layers.
- Developed and optimized REST APIs, authentication flows, caching mechanisms, and modular application components with a focus on scalability, maintainability, and performance.
- Collaborated with product, UX, QA, and DevOps teams throughout the software development lifecycle, from technical analysis and solution design through deployment and production support.
- Established and maintained CI/CD pipelines using GitLab and containerized application services with Docker, improving deployment consistency and reliability.
- Applied software engineering best practices including Clean Code, code reviews, automated testing, modular design, and maintainable architecture.
- Mentored developers and participated in technical decision-making, architecture discussions, code reviews, and Agile/SCRUM ceremonies.
- **Technologies:** Java, Spring Boot, Hibernate, Angular, TypeScript, REST, Microservices, Docker, GitLab CI/CD, SQL, Postman, Figma, SCRUM.

Zoluxiones / Scotiabank

Semi-Senior Full-Stack Developer (Java / React)

February 2022 – April 2023

Santiago, Chile

- Developed and modernized enterprise financial microservices for Scotiabank Chile, focusing on security, interoperability, maintainability, and service performance.
- Designed and implemented REST APIs using Java and Spring Boot and developed interactive enterprise interfaces using React and TypeScript.
- Contributed to the definition of technical standards for API versioning, documentation, CI/CD, testing, and software development practices within a regulated banking environment.
- Collaborated closely with software architects, QA engineers, developers, and business stakeholders to deliver solutions aligned with technical and business requirements.
- Participated in Agile/SCRUM processes including technical analysis, estimation, development, code reviews, testing, deployment, and production support.
- **Technologies:** Java, Spring Boot, React, TypeScript, REST, Microservices, Docker, Swagger/OpenAPI, JIRA, Postman, Agile/SCRUM.

Infobox / Nubedian

Full-Stack Developer (Java / React)

February 2021 – February 2022

Karlsruhe, Germany

- Developed software integration solutions for healthcare institutions in Germany and ICU management platforms for the Peruvian Ministry of Health.
- Implemented backend services and business modules using Java 13, Spring Boot, and MariaDB, following modular and maintainable software design practices.
- Developed frontend workflows and user interfaces using React and Material UI, integrating them with backend REST services.
- Containerized application services with Docker and supported automated deployment workflows using GitLab CI/CD.
- Developed and tested REST APIs and integrations using Postman and contributed to the complete software delivery lifecycle.

- **Technologies:** Java 13, Spring Boot, React, Material UI, MariaDB, Docker, GitLab CI/CD, REST, Postman.

ANFA

Python Full-Stack Developer

October 2020 – February 2021

Arequipa, Peru

- Developed an automated electronic invoicing solution integrating SAP Business One with SUNAT through RESTful APIs.
- Implemented backend business logic and integrations using Python and Odoo, with PostgreSQL as the primary database.
- **Technologies:** Python, Odoo, PostgreSQL, REST APIs, SAP Business One, Bootstrap.

Fundação Getulio Vargas (FGV)

Data Scientist / Full-Stack Developer (Python / React)

June 2019 – October 2020

Rio de Janeiro, Brazil

- Designed and implemented interactive data visualization systems for anomaly detection and exploratory data analysis.
- Developed data processing and analysis workflows using Python, pandas, NumPy, and statistical visualization libraries.
- Built interactive web interfaces using React and visualization technologies including D3.js and Deck.gl.
- Developed REST APIs and data-driven backend services using Django and Django REST Framework.
- **Technologies:** Python, Django, Django REST Framework, pandas, NumPy, Altair, Plotly, React, D3.js, Deck.gl, REST, Bootstrap.

InkaLabs

Full-Stack Developer (Python / React)

June 2020 – September 2020

Arequipa, Peru

- Designed and developed web platforms for e-commerce and investment-related applications.
- Implemented backend services using Django and Django REST Framework and developed frontend applications using React and TypeScript.
- Designed API integrations and application components using REST and GraphQL.
- **Technologies:** Python, Django, Django REST Framework, React, TypeScript, GraphQL, REST.

Art Atlas

Full-Stack Developer (Python / Java)

March 2016 – April 2018

Arequipa, Peru

- Developed ERP solutions for production management and internal business operations.
- Integrated enterprise applications with SAP Business One through SOAP web services.
- Developed backend modules using Python/Odoo and Java and implemented database-driven business functionality using PostgreSQL.
- **Technologies:** Python, Odoo, Java 7/8, SOAP, PostgreSQL, Git, SAP Business One.

EDUCATION

Universidad Católica San Pablo, Arequipa

Candidate for Master's Degree in Computer Science

May 2018 – December 2019

Universidad Nacional de San Agustín, Arequipa

Bachelor's Degree in Systems Engineering

April 2013 – December 2017

TECHNICAL EXPERTISE

Programming: Java, Python, JavaScript, TypeScript, SQL, C/C++

Back-End: Spring Boot, Spring, Hibernate, Django, Django REST Framework, FastAPI, Flask, Node.js, Microservices, REST, GraphQL

Architecture: Microservices, RESTful APIs, Distributed Systems, Clean Code, SOLID, Modular Architecture, API Design, API Integration

Security: CSRF Protection, Session Management, Authentication, Secure API Development

Front-End: React, Angular, Redux, Material UI, D3.js, Deck.gl, Bootstrap

Databases: PostgreSQL, MariaDB, MySQL, MongoDB, SQL Server, Oracle

Caching & Distributed Systems: Redis, Microservices, Distributed Systems, REST APIs

Cloud & DevOps: AWS, Azure, EC2, Docker, GitLab CI/CD, GitHub, Bitbucket, Linux

Development Tools: Git, Swagger/OpenAPI, Postman, JIRA, Figma, Selenium

Methodologies: Agile, SCRUM, TDD, Code Review, CI/CD, Software Development Lifecycle

RELEVANT SCIENCE PROJECTS

Anomaly Detection in Spatio-Temporal Traffic Data

Implemented anomaly detection models based on statistical data depth methods and interactive visualization techniques to support analysis and decision-making in traffic systems.

Biomass Monitoring in the Peruvian Highlands

Developed biomass detection algorithms using NDVI analysis from satellite and drone imagery, applying image segmentation and neural-network-based classification techniques.
